

“Save Money and Time with Factory Pre-finishing”

- Assures that the proper amount of product is applied and applied evenly
- All 6 sides of the board are coated shielding it from moisture absorption, which minimizes expansion and contraction of the wood fibers and therefore extends the life of the wood siding.
- Proper temperatures are assured during application and drying times.
- Eliminates seasonal painting except for the third or in-field coat.
- Allows wood siding to be installed and to be protected from moisture and sunlight from day one. After the siding is installed, caulk ends grain seams, clean and apply the in-field coat. For optimum system performance apply third coat within 30 days of installation.
