

# NatureColor®

## Where to Use NatureColor® Base Coat and Recoater

### NatureColor® Base Coat

- First and Second Coat in the recommended three-coat siding system
- Decks and Railings
- Trim
- Entry Doors and Garage Doors
- Shakes
- Shutters
- Fencing and Garden Furniture
- Docks

### Nature Color® Recoater

- Final protective topcoat used in conjunction with NatureColor® Base Coat
  - In the recommended three-coat siding system
  - Trim
  - Entry Doors and Garage Doors
  - Shutters

Do not use Recoater on horizontal surfaces or high moisture areas such as:

Decks or Railings  
Docks  
Fencing  
Garden furniture

Recoater has more solids and is a softer film build and therefore does not take direct abrasion well. In high moisture situations the wood needs to be protected and yet breathe as much as possible therefore the final coat of Recoater should not be used.
